Brainloop

## Brainloop

The Brainloop platform for bespoke online meeting and entity management.

Managing complex global operations requires best in class technology solutions. The Maples Group utilises Brainloop to supplement its robust [corporate secretarial and board support services](#) offering, providing clients with bespoke online meeting and entity document management functionality.

With its intuitive and user friendly interface, Brainloop significantly enhances the user's experience of accessing and navigating both meeting materials and entity documentation. Authorised representatives can easily and securely access the documents they need, using the system, from a fully integrated and centralised storage location.

Immediate access across a range of platforms and multiple devices - including smartphones and tablets - to a comprehensive repository of documents, is combined with the most advanced data protection features, representing the highest level of security for document storage and distribution. These measures include strict access controls, two factor authentication, data encryption, data integrity checks to detect manipulation attempts and a tamper proof audit trail.

Brainloop's ePortal, trusted by 70 percent of Germany's DAX 30 listed companies, provides the ability to sync meeting materials for offline access, while users can bookmark and annotate documents with specific feedback, in a fully searchable, agenda-driven navigation environment.

Through the Maples Group's eRepository facility, Irish clients can benefit from features addressing the Central Bank's CP86 requirement for fund management companies to maintain entity records securely in or from Ireland. Where funds are not subject to CP86 regulations the high security eRepository facility can provide an additional layer of good governance which may be considered appropriate.
