

# Global Entity Services

---

In today's fast-paced financial services industry, large institutions and managers are looking for opportunities to outsource entity formation and management in a single service provider in order to allow in-house teams to focus on their core business. With bespoke global entity solutions customised to enhance synergies and efficiencies between entities domiciled across different jurisdictions, your single service provider becomes a true global partner.

The Maples Group's unrivalled local expertise across its global network and proven track record in legal and financial services, provides natural efficiencies that streamline all aspects of entity services for our clients, wherever they are in the world.

Our global entity services provides a dedicated relationship manager to allow a single point of contact and client service teams across relevant jurisdictions to support all your entity service needs.

## Our Clients

Investment strategies and corporate structures used by our clients to deliver value to their investors and shareholders typically require that entities be formed and serviced in multiple jurisdictions around the globe. As a result, our clients require a service provider that can act as a strategic partner to create, implement and oversee synergetic relationships between their internal teams, external counsel and other service providers in order to increase operational efficiencies.

## Our Services

Partnering with our clients to enhance their corporate administration, regulatory, fiduciary and legal services experience, the Maples Group provides the following solutions:

- **Single point of contact:** provide a monitored client-specific inbox to ensure all entity service requests are tracked and completed;
- **Centralised compliance:** coordinate all necessary entity and regulatory filings (including the payment of annual and government fees) in order to maintain the regulatory compliance and good standing of entities;
- **Centralised data management:** maintain and manage entity-related data, enhancing overall reporting functionality for regulatory, audit and management purposes;
- **Centralised document management:** tag and load all entity-related documents to a central platform ensuring consistent folder structures and naming conventions are utilised;

- **Centralised billing:** consolidate billing across multiple jurisdictions to decrease review and approval time;
  - **Secure online access:** provide secure online data and document access via an online portal, eServices;
  - **Protocol development:** develop checklists and processes for administrative and repetitive tasks to ensure multiple parties move efficiently through task workflows; and
  - **Global liaison:** work with our clients' current service providers or our established global network of service providers to ensure all entities are managed effectively.
-
