

Accounting, Tax & Agency Services

The Maples Group supports client mandates with services that address accounting, bank accounts administration, financial reporting and external audit and tax coordination and filing requirements for a variety of investment funds, structured finance entities and special purpose vehicles.

Annual audits are typically a standard industry best practice, however, in some jurisdictions they are also a statutory requirement. Timely and accurate accounting and financial reporting are critical to the success of any operation. In addition, various entity transactions require cash management and agency services to support the administration of cash flows and reporting.

Operating in key financial centers across the Americas, Asia, Europe and the Middle East, our dedicated teams of qualified accountants and administration professionals, many with prior experience in investment banking and at top tier accounting and consultancy firms, undertake continuous professional education to ensure they remain up-to-date with the ever changing requirements of financial reporting standards and local statutory obligations.
